

Variable Length Subnet Mask (VLSM) Network Design Question

ABC Company has acquired the IP Address 192.3.4.0/24. The company's 3 branches have workstations as specified below:

- A. Asokwa - 58 hosts
- B. Asafo - 26 hosts
- C. Adum - 10 hosts

The branches are connected in a client-server architecture as shown in the network diagram of Figure I below.

WAN Requirements:

- A. WAN1: Requires 2 IP Addresses
- B. WAN2: Requires 2 IP Addresses
- C. WAN3: Requires 2 IP Addresses

Task:

D. Design a suitable network for ABC Company. Your design should indicate:

- A. Subnet Address
- B. The IP Address Ranges for each subnet
- C. The Network Address (site address)
- D. The Broadcast Address for each subnet

E. Draw the network diagram for your network design from Activity D.
